Search for Fresh Air Has Aided Advance of Civilization, Gardner Mack Proves With Ease

Nith Mahoney's Aid. Self-Styled Scientist of Times Staff Exploits Novel Method of Distribution.

ome Science and Much Reflection Concerning Air. Hot and Otherwise, Marks Dissertation on Bug Without Name.

By GARDINER MACK.

The incentive of the original human being to be human has been discovered. It is AIR.

Air in its infinite variety was the eginning of the great line of clevage etween man and the other section of he animal kingdom. There is no place where there is such an infinite variety f air as in the animal kingdom. Some inimals don't mind it. But it is an ven bet that the main reason man took ate by the hand and allowed himself o be led over the threshold of the home f his chimpanzee parents was a desire get a different kind of air-it was this riginal yearning that started man on is journey through life by the route hat has been marked civilization.

Perhaps man didn't realize that he as going to be civilized. His sole sire on that momentous occasion was obtain fresh air. And there can be manner of doubt as to fis keeness. there is anyone who scorns this heory for a moment just let him go to he ornate habitat of the simian group any well-kept zoo and it will be a atter of very little more than ten minutes before he, too, will be conimed with a yearning for fresh air. Seeking the Air.

If one cares to dwell upon the air neory at length it would not be diffiult to prove its participation also in he development of the animal all the ay from the invertebrate mass of the riginal protoplasm to-to Dustin Farum, let us say. (Since Dustin went to the moving picture business he as counterfeited almost every departinent of life's activities.) But imagine for an instant that jelly-like mass we are told represents the very inception of animal life, lying inert at the bottom of the sea. It is represented as a most crude affair. There were just two inlings it could do—lie there and expired ennul, or go to the surface—which lieant goirg for air. And protoplasm is alleged to have squirmed and developed liebelf through a thousand years or so sat for the purpose of setting to the urface. It must have been air that it wanted, because that is about all there was to the universe at that particular time. And it developed from jellyfish to tadpole, and from tadpole to toad, and from toad to something else, and still something more, until the first four-legged animal appeared.

It was the constant seeking of a hange of air that created this progress. It is the constant warring of the greatest volume of oxygen. The result is evident, therefore that the forther country is much to be decided. All this is one of those ideas which scientists bull out of the atmosphere and the tug of war is still on to determine whether or not it is a regular working idea and simply a balloon-like theory that a sharp-pointed fact might collable.

Biologist's Don't Mind Them. ment of life's activities.) But imagine

eens. They will claim there is no cientific basis for it. Perhaps there an't. But it certainly does sound good. Resides it makes a corking introduction of a brief dissertation on air. And we won't mind what the scientists say shout it because they are more or less he inventors of a variety of air themelves. You see, every little while some earned person reaches into the atmosphere and grasps a new idea. Then some a scientific tug of war, the purpose of which is to determine whether into the zephyr blown over the average state of mind by the upward reach and downward jerk of the intellectual aim was fresh or simply hot air. It may be amusing on a quiet Sunay like this to contemplate the fact that from creation to the present time he animal and vegetable kingdom ave been engaged in a beautifully alanced competition that has supplied the earth with alternate doses of fresh and hot air. And just as the lessing for fresher air appured man. But it certainly does sound good. on the productions is already started and the great manager looks forward and to progress from the beginning. It might be more or less appropriate or remark that the ability to criculate that it is the thing that most distinguishes him not only from all other management. nimals, but marks out the individual uman being from others of his own wind. Thus, so important a feature of ife hag this become, that the highest evelopment of the breed, and this ers to the extent of more than a collight interest eugenists, the one that

Here's the Application.

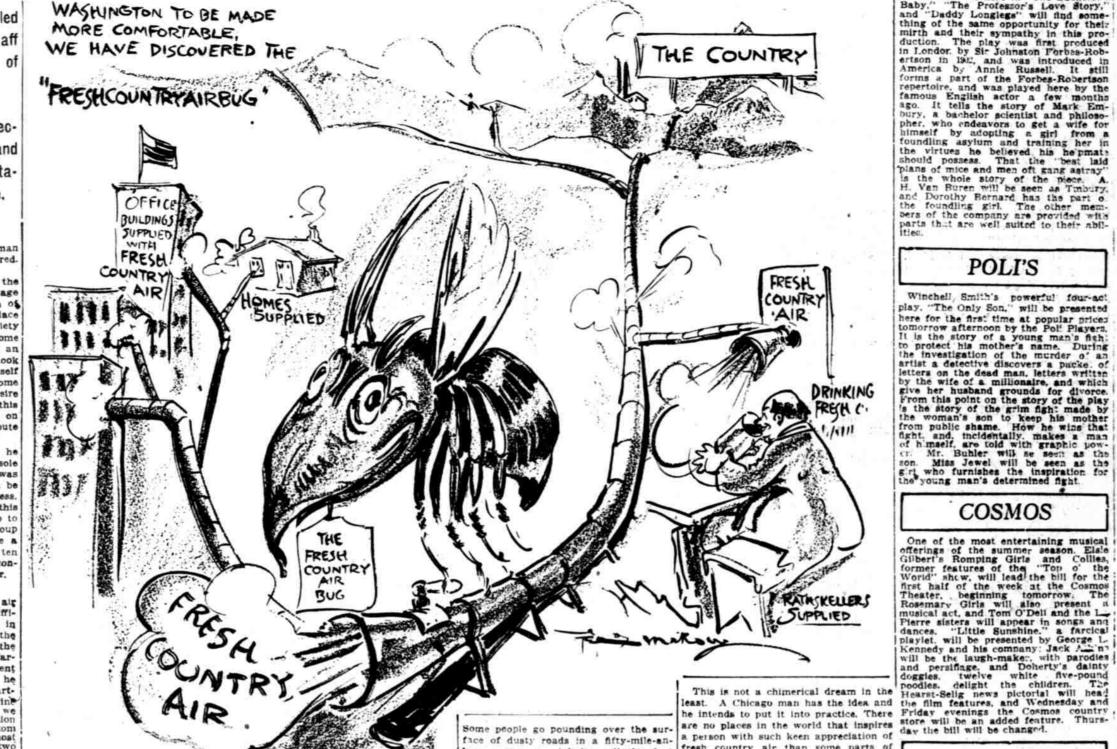

The injection of this little bit of real the discovery of several very clever unknowns. Five of those who got The injection of this little bit of real science was done with malice afore-thought. Its purpose is to give a them from which can be worked a description of the varied devices that mave been employed by mankind for untold generations to supply himself with the breath of life in a manner most pure and least deflied by the contaminations of civilization.

It might seem strange to the average mind that civilization contract. The discovery of several very clever very least very clever very least very clever. The discovery of several very clever very least very clever. The discovery of several very clever. The discovery of several very clever. The discovery of those who got the good contracts have never been on the boards before. Frazee believes he lits montable for its naturalness and girlish appeal. The leading man will be L. Monta Bell, who is well known in Washington. He has been leading man of the Richardson Stock Comapny during the past season, and has scored a big success.

She went through all the degrees and finally was nanded a far contract. She refused. Again she refused. Frazee gave her a better one. When she had deposited her copy of the origing the past season, and has scored a big success.

ARMY WORMS

nge mind that civilization contaminates contract in her handbag, she dropped the sir. But it does. Get as much into a chair, and fainted. Frazee civilization as you can into a small brought her around with a little water space—for instance on the interior of and she said:

as it is spread on the far Western prairies where miles separate the houses. And you have the lowest possible supply of carbon dioxide with the greatest volume of oxygen. The result is applies to the carbon dioxide with the greatest volume of oxygen. The result is applies to the carbon dioxide with the greatest volume of oxygen. The result is applied to the carbon dioxide with the greatest volume of oxygen. The result is applied to the carbon dioxide with the greatest volume of oxygen.

Biologist's Don't Mind Them.

Of course, there isn't ahy doubt but hat the great biologists will rise up in rath and smash this theory to smithcurious microbe, which should have a everybody admits he wants fresh air, everybody get his share
